Exercise 1
$$E = -\frac{1}{12} \begin{cases} \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \end{cases} \begin{cases} \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} \\ \frac{1}{12} & \frac{1}{12} &$$

Aimsi E est la somme des - Pp log(Pp) gui sont des termes 3,0 donc E est 3,0 Si vy=...= vn dans si vy=...= vn= lo Pl= o siron et Po log(Pp) = 0 can o log(o)= 7 log(1)=0 donc [=0

Si les $v_1, ..., v_N$ no sont jos tous igaux alors il y a $l_1 + l_2$ tols que $l_{1} + l_{2} = l_{2} + l_{2} = l_{2} + l_{2} = l_{2$

et on o row
$$-\hat{l}_{1}\log(\hat{p}_{1})$$
 zo donc $-\hat{p}_{2}\log(\hat{p}_{1})$ zo donc $-\hat{p}_{2}\log(\hat{p}_{1})$ $=$ $-\hat{p}_{1}\log(\hat{p}_{1})$ $+$ $\xi-\hat{p}_{2}\log(\hat{p}_{2})$ $=$ $-\hat{p}_{1}\log(\hat{p}_{1})$ $=$ $-\hat{p}_{2}\log(\hat{p}_{2})$ $=$ $-\hat{p}_{2}\log(\hat{p}_{2})$ $=$ $-\hat{p}_{3}\log(\hat{p}_{2})$ $=$ $-\hat{p}_{4}\log(\hat{p}_{2})$ $=$

$$E = -\frac{2}{70} \log(\frac{2}{70}) - \frac{6}{70} \log(\frac{6}{70}) - \frac{2}{70} \log(\frac{2}{70})$$

2 0.95

3)
$$N=12$$
 $\hat{\beta}_1 = \frac{5}{12}$ $\hat{\beta}_2 = \frac{7}{72}$

$$\bar{E} = -\frac{5}{12} \log \left(\frac{5}{12} \right) - \frac{7}{72} \log \left(\frac{7}{12} \right)$$

Escercia 2

$$C_{1} = \{i; x_{1}^{(i)} \leq t\}$$
 $= \{1, 2, 3, 4\}$

$$E_{t} = \frac{4}{70} E(\frac{3}{70}, \frac{3}{70}) + \frac{6}{70} E(\frac{3}{50}, \frac{3}{70})$$

$$= \frac{4}{70} \left[-\frac{3}{4} \log[\frac{3}{4}] - \frac{7}{4} \log[\frac{1}{4}] \right] + \frac{6}{70} \left[-\frac{1}{6} \log[\frac{2}{6}] - \frac{5}{6} \log[\frac{5}{6}] \right]$$

2 0,49

3)
$$C_{1} = \{i; x_{2}^{(i)} \leq 5\}$$
 $= \{1, 2, 4, 6, 4\}$

$$C_{2} = \frac{1}{3}, \frac{5}{2}, \frac{10}{5}$$

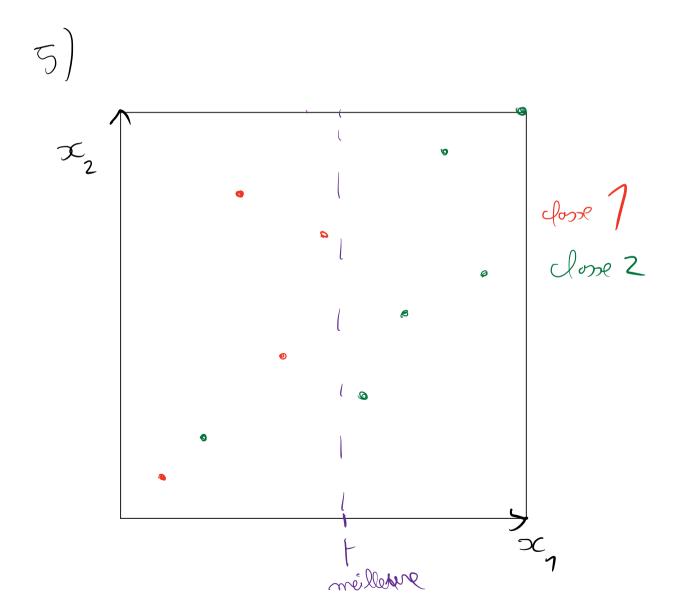

$$= \frac{1}{3}, \frac{5}{7}, \frac{7}{8}, \frac{9}{10}, \frac{10}{5}$$

$$E_{+} = \frac{4}{70} E(\sqrt[3]{7}, \sqrt[4]{7}, \sqrt[4]{6}) + \frac{6}{70} E(\sqrt[3]{3}, \sqrt[3]{5}, \sqrt[3]{7}, \sqrt[3]{$$

(4) On préfére la tremér clossiquer
$$X_1 \leq t$$

The state of
$$x_1 \leq t$$

car il sépare mieux les lasses 7 et 2 En effet " sy Et" conespond empiriquement à presque que des Josses 7 dons la base d'appentisoge et " x27t" presque seulement des Josses 2.
